

## *Press Release*

### **SARGENT® WiFi-enabled locksets now compatible with Reach Systems access management application**

*New Haven* – SARGENT, an ASSA ABLOY Group company, announces that its Profile Series v.S2 and Passport 1000 P2 WiFi-enabled locksets now integrate with the Reach Access Control System (ACS) from Reach Systems, a leader in IP-based Access Control.

ReachNet™ users now have the ability to manage SARGENT wireless locks using the web-based access control platform.

The SARGENT Profile Series v.S2 and Passport 1000 P2 locks offer the ability to extend the Reach Access Control System using a facility's existing wireless infrastructure, while eliminating the need for an access control panel and local server. Each lock has a built-in wireless transmitter, 125 kHz proximity or mag-stripe card reader, electromechanical strike, backup keyway, and optional keypad and deadbolt.

Each wireless lock can be installed in just 1-2 hours. With secure wireless communications and six (6) AA batteries powering each lock, this solution is perfect for indoor or outdoor locations where it is difficult or cost-prohibitive to have a wired lock. Just like a traditional panel, each lock contains cardholder schedules and permissions to make access control decisions locally. Each lock is programmed to communicate with the remotely hosted ReachNet™ server and be completely managed online using ReachNet's robust management and reporting tools.

“By partnering with Reach Systems, ASSA ABLOY is giving end-users the ability to choose locking hardware that fits into their access control management system without the need for proprietary software,” said Martin Huddart, Vice President - Electronic Access Control for ASSA ABLOY Door Security Solutions. “This benefits end-users by allowing them to utilize a single software platform for their building control system rather than purchasing a separate proprietary software package that works exclusively with their locks.”

Glenn Forrester, Reach’s CEO notes, “We are very excited about our latest technology integration with SARGENT. Our partner integrators can now offer enterprise-class networked electronic access control at less than half the total installed cost of a traditional panel-based solution – without giving up any features or functionality. By combining the features of SARGENT’s wireless locks with our hosted ReachNet server, we are able to provide high security with added value to our partner integrators and customers.”

### **About SARGENT**

Founded in the early 1800s, SARGENT is a market leader in locksets, cylinders, door closers, exit devices, electromechanical products and access control systems for new construction, renovations and replacement applications. The company’s customer base includes commercial construction, institutional and industrial markets.

**About ASSA ABLOY**

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user demands for security, safety and convenience.

**About Reach Systems**

Reach Systems is the leader in delivering Managed Services for Hosted Access Control and Hosted Video. The Reach ACS allows our customers to cost effectively deploy a centrally managed, high security access control system across their enterprise with the option to manage it themselves securely from anywhere in the world or outsource system management to one of our Managed Services Partners – in whole or in part – whatever best suits the business requirements. Reach Systems frees you to focus on your business, not your access control system.
