

Reach Systems Partners with Axis Communications and Secure-I to Provide Remote Hosted Video Applications

[FOR IMMEDIATE RELEASE]

Oakland, CA – February 5, 2009 – Reach Systems Inc. announced today that it has formed a partnership with Axis Communications, the global leader in the network video market, and Secure-i, a video hosting service to deliver fully integrated access control and IP video as a managed service. As a result of this development partnership, Reach will now be able to offer its customers IP-based video surveillance that can be associated with a range of physical security devices, such as access control, alarms and environmental monitoring. The Reach hosted solution will allow users to attach video to each unauthorized access attempt or perimeter security breach, eliminating the need to search for and match video content to security events. And the user will be able to do this without the need for local NVR's, storage devices, or local servers because all of the application software and storage are remotely hosted.

The integrated IP-based solution will allow users to receive and forward both live and recorded video through the standard Reach Web browser-based interface. The integrated solution dramatically increases the situational awareness capabilities of IP video surveillance systems at a cost that makes it affordable for customers with remote sites.

“We deliberately designed our platform and service delivery model to drive down the cost of security deployments for those customers who have to manage many remote sites centrally while allowing our channel partners to create profitable recurring revenue from managed services” stated Glenn Forrester, Reach Systems founder and CEO. “However, what makes us unique is that our platform is open for connecting all manner of devices which allows us to very quickly package “segment specific” solutions for the market that even go beyond physical security. This will be the first fully remote hosted, integrated access and video solution and it will change the current price/performance paradigm and put this technology in the hands of customers who have historically been unable to afford it.”

The company is currently beta testing the hosted video solution and expects to be ready for commercial launch in **April 2009**.

About Reach Systems

Reach Systems is the leader in delivering Managed Services for Access Control. The Reach ACS allows our customers to cost effectively deploy a centrally managed, high security access control system across their enterprise with the option to manage it themselves securely from anywhere in the world or outsource system management to one of our Managed Services Partners – in whole or in part – whatever best suits their business.

Reach Systems frees you to focus on your business, not your access control system.

About Axis Communications

Axis is an IT company offering network video solutions for professional installations. The company is the global market leader in network video, driving the ongoing shift from analog to digital video surveillance. Axis products and solutions focus on security surveillance and remote monitoring, and are based on innovative, open technology platforms. Axis is a Swedish-based company, operating worldwide with offices in more than 20 countries and cooperating with partners in more than 70 countries. Founded in 1984, Axis is listed on the NASDAQ OMX Stockholm, under the ticker AXIS. For more information about Axis, please visit our website at www.axis.com.

About Secure-i

Secure-i, Inc. was created specifically to address the merging demand for hosted security services. The IT and security professionals who comprise Secure-i, Inc. bring decades of combined experience in networking, system design, and digital voice, data, and video recording. Secure-i, Inc. is a woman-owned company based in Chicago with offices in both Illinois and New Jersey.
