FOR IMMEDIATE RELEASE

EDGE ANNOUNCES THE BETA RELEASE OF ITS ACCESS CONTROL SYSTEM

The Edge ACS Will Feature Edge's Biometric Fingerprint Reader and IP-based Lock Controller

OAKLAND, CA – December 1, 2005 – Edge Integration Systems, a leading manufacturer of IP-based electronic access control systems announces the Beta release of its first product, the Edge ACS. Edge's Beta Test Program gives select systems integrators and end users the opportunity to install, test, and evaluate the Edge Access Control System prior to the product's market release.

"We're very excited to be working with so many of the country's top systems integrators during our Beta Release," noted Glenn Forrester, Edge founder and CEO.

During the Beta Test Program participants will install one fingerprint reader and lock controller at each access controlled door. Each participant will test the technology for a two-month period, sharing feedback with Edge and directly contributing to the final phase of product development.

In exchange for their participation, Beta users enjoy the earliest access to the latest IP-based access control technology. Participants also receive free technical support throughout the duration of the Beta test period, and the opportunity to sharpen their skill set and awareness of the latest in IP-based access control system design.

About Edge

Edge enables corporations and government entities to securely manage their facility and employee access with the Edge Access Control System (ACS). The Edge ACS is the world's first networked, biometric access control system based entirely on Internet communication protocols. The product allows our customers to cost-effectively deploy centrally managed, high security access control systems across their enterprises anywhere in the world and manage them securely from any place with Internet access.

Edge distributes its proprietary ACS to systems integrators and security professionals in the U.S. and worldwide. Edge is proud to be a trusted solution provider for access control.
